BREAKER

HIGH YIELD • QUALITY PROTEIN • GOOD DISEASE RESISTANCE

Breaker is a high yielding, medium height, medium maturity hard red spring wheat with good standability for a standard height variety. Breaker produces medium protein, high test weight grain. It is resistant to stem rust, moderately resistant to leaf rust and foliar disease (tan spot and Septoria), moderately resistant to scab, moderately susceptible to stripe rust, and appears resistant to moderately resistant to bacterial blight. Breaker is a free threshing variety with good shatter resistance.

MANAGEMENT STRATEGY

1. Breaker is a medium maturity variety that responds to early planting but can be planted on any reasonable planting date.
2. Plant Breaker at normal populations for your area.
3. Fertilize for a yield of about 80-100 bu (2.5 lbs of N/bushel of yield to reach 14% protein). Make sure that Sulfur levels are in balance with Nitrogen; 5N:1S in the soil and 10N:1S in plant tissue is recommended.
4. Provide an early (4-5 leaf stage) fungicide treatment for general plant health.
5. Fungicide treatment at heading for severe scab infestations.
6. Harvest in a timely fashion to maintain high falling numbers.
